

NON-CLASSICAL MODAL AND PREDICATE LOGIC

23rd – 26th November 2021

organized by the chairs of
Logic and Epistemology and Nonclassical Logic
at the Department of Philosophy I
of Ruhr University Bochum

Book of Abstracts

Location details for physical participation:

Jahrhunderthaus
Alleestraße 80
44973 Bochum

Please direct all inquiries by email to: `ncmp12021 [at] rub [dot] de`

Programme committee Arnon Avron, Libor Běhounek (*co-chair*), Agata Ciabattoni, Petr Cintula, Ed Mares, Alessandra Palmigiano, Dolf Rami, Greg Restall, Peter Schuster, Christian Strasser, Yde Venema, Heinrich Wansing (*co-chair*), Fan Yang

Organization committee Hitoshi Omori (*chair*), Fabio De Martin Polo, Franci Mangraviti, Satoru Niki, Daniel Skurt, Andrew Tedder, Heinrich Wansing, Timo Weiß

Tuesday

23rd November

9:15 – 9:30	Introduction	
9:30 – 10:30	Two-layered Belnapian logics for uncertainty M. Bílková	9
10:30 – 11:00	Information Types in Intuitionistic Predicate Logic V. Puněochář, C. Noguera	87
11:00 – 11:30	<i>Coffee/tea break</i>	
11:30 – 12:00	Paraconsistent modal logic of comparative uncertainty M. Bílková, S. Frittella, D. Kozhemiachenko	26
12:00 – 12:30	Logic with Two-Layered Modal Syntax: Abstract, Abstracter, Abstractest P. Cintula, C. Noguera	42
12:30 – 13:00	Changing the World Constructively I. Sedlár	102
13:00 – 14:15	<i>Lunch break</i>	
14:15 – 14:45	Hybrid logic with propositional quantifiers: Natural deduction style (Work in progress) T. Braüner, P. Blackburn, J. L. Kofod	29
14:45 – 15:15	Defeasible Linear Temporal Logic A. Chafik, F. Cheikh-Alili, J.-F. Condotta, I. Varzinczak . . .	36
15:15 – 15:45	Modals and Quantifiers in Neighbourhood Semantics for Relevant Logics A. Tedder, N. Ferenz	108
15:45 – 16:15	Modal QUARC J. Raab	90
16:15 – 16:45	<i>Coffee/tea break</i>	
16:45 – 17:45	New results on Kripke completeness and incompleteness in modal predicative logic V. Shehtman	16

Wednesday

24th November

9:30 – 10:30	Is Intuitionistic Mathematics Compatible with Classical Logic? L. Cohen 12
10:30 – 11:00	Semantical investigations on non-classical logics with recovery operators (using the Isabelle proof assistant) D. Fuenmayor 55
11:00 – 11:30	<i>Coffee/tea break</i>
11:30 – 12:00	On Three-Valued Modal Logics: from a Four-Valued Perspective X. Wang, Y. Song, S. Tojo 111
12:00 – 12:30	The Simple Model and the Deduction System for Dynamic Epistemic Logic T. Kawano 70
12:30 – 13:00	On the role of Dunn and Fisher Servi axioms in relational frames for Gödel modal logics T. Flaminio, L. Godo, P. Menchón, R. O. Rodriguez 52
13:00 – 14:15	<i>Lunch break</i>
14:15 – 14:45	Carnap’s Problem for Generalised Quantifiers S. G. W. Speitel 105
14:45 – 15:15	Completeness in Partial Type Logic J. Raclavský, P. Kuchinka 93
15:15 – 15:45	Defusing Small Explosions in Topic-Sensitive Intentional Modals T. Ferguson 49
15:45 – 16:15	Modal Intuitionistic Algebras and Twist Representations U. Rivieccio 97
16:15 – 16:45	<i>Coffee/tea break</i>
16:45 – 17:45	[n. a.] T. Litak [n. a.]

Thursday

25th November

9:30 – 10:30	Revision without revision? Two case studies in inconsistent mathematics Z. Weber 17
10:30 – 11:00	Maximality of logic without identity G. Badia, X. Caicedo, C. Noguera 18
11:00 – 11:30	<i>Coffee/tea break</i>
11:30 – 12:00	Towards First-Order Partial Fuzzy Modal Logic A. Dvořák 43
12:00 – 12:30	On the connexivity of fuzzy counterfactuals L. Běhounek 22
12:30 – 13:00	Connexive arithmetic formulated relevantly F. Cano-Jorge, L. Estrada-González 33
13:00 – 14:15	<i>Lunch break</i>
14:15 – 14:45	Truth Tables for Modal Logics: The Forgotten Papers L. Grätz 62
14:45 – 15:15	Yes, Fellows, Well-known Modal Logics are at Most 8-valued P. Pawlowski, E. La Rosa 84
15:15 – 15:45	Completing most quantified modal logics E. Orlandelli 77
15:45 – 16:15	Glivenko classes and constructive cut elimination in infinitary logics G. Fellin, S. Negri, E. Orlandelli 46
16:15 – 16:45	<i>Coffee/tea break</i>
16:45 – 17:45	Potentialism and Critical Plural Logic Ø. Linnebo 13

Friday

26th November

9:30 – 10:30	Frame definability in finitely-valued modal logic C. Noguera	14
10:30 – 11:00	Nonclassical first-order logics: Semantics and proof theory G. Greco, P. Jipsen, A. Kurz, M.A. Moshier, A. Palmigiano, A. Tzimoulis	66
11:00 – 11:30	<i>Coffee/tea break</i>	
11:30 – 12:00	Two-Dimensional Rigidity J. Mai	74
12:00 – 12:30	Hyperintensional models for non-congruential modal logics M. Pascucci, I. Sedlár	80
12:30 – 13:30	Normative Dilemmas, Dialetheias, and their Modal Logic G. Priest	15
13:30 – 13:45	Closing remarks	
13:45 – 15:00	<i>Lunch</i>	

INVITED TALKS

23.11. (Tue) 9:30 – 10:30	Two-layered Belnapian logics for uncertainty Marta Bílková 9
24.11. (Wed) 9:30 – 10:30	Is Intuitionistic Mathematics Compatible with Classical Logic? Liron Cohen 12
25.11. (Thu) 16:45 – 17:45	Potentialism and Critical Plural Logic Øystein Linnebo 13
24.11. (Wed) 16:45 – 17:45	[n. a.] Tadeusz Litak [n. a.]
26.11. (Fri) 9:30 – 10:30	Frame definability in finitely-valued modal logic Carles Noguera 14
26.11. (Fri) 12:30 – 13:30	Normative Dilemmas, Dialetheias, and their Modal Logic Graham Priest 15
23.11. (Tue) 16:45 – 17:45	New results on Kripke completeness and incompleteness in modal predicative logic Valentin Shehtman 16
25.11. (Thu) 9:30 – 10:30	Revision without revision? Two case studies in inconsistent mathematics Zach Weber 17

CONTRIBUTED TALKS

25.11. (Thu) 10:30 – 11:00	Maximality of logic without identity Guillermo Badia, Xavier Caicedo, Carles Noguera 18
25.11. (Thu) 12:00 – 12:30	On the connexivity of fuzzy counterfactuals Libor Běhounek 22
23.11. (Tue) 11:30 – 12:00	Paraconsistent modal logic of comparative uncertainty Marta Bílková, Sabine Frittella, Daniil Kozhemiachenko ... 26
23.11. (Tue) 14:15 – 14:45	Hybrid logic with propositional quantifiers: Natural deduction style (Work in progress) Torben Braüner, Patrick Blackburn, Julie Lundbak Kofod . 29
25.11. (Thu) 12:30 – 13:00	Connexive arithmetic formulated relevantly Fernando Cano-Jorge, Luis Estrada-González 33
23.11. (Tue) 14:45 – 15:15	Defeasible Linear Temporal Logic Anasse Chafik, Fahima Cheikh-Alili, Jean-François Condotta, Ivan Varzinczak 36
23.11. (Tue) 12:00 – 12:30	Logic with Two-Layered Modal Syntax: Abstract, Abstracter, Abstractest Petr Cintula, Carles Noguera 42
25.11. (Thu) 11:30 – 12:00	Towards First-Order Partial Fuzzy Modal Logic Antonín Dvořák 43
25.11. (Thu) 15:45 – 16:15	Glivenko classes and constructive cut elimination in infinitary logics Giulio Fellin, Sara Negri, Eugenio Orlandelli 46
24.11. (Wed) 15:15 – 15:45	Defusing Small Explosions in Topic-Sensitive Intentional Modals Thomas Ferguson 49
24.11. (Wed) 12:30 – 13:00	On the role of Dunn and Fisher Servi axioms in relational frames for Gödel modal logics Tommaso Flaminio, Lluís Godó, Paula Menchón, Ricardo Oscar Rodríguez 52
24.11. (Wed) 10:30 – 11:00	Semantical investigations on non-classical logics with recovery operators (using the Isabelle proof assistant) David Fuenmayor 55
25.11. (Thu) 14:15 – 14:45	Truth Tables for Modal Logics: The Forgotten Papers Lukas Grätz 62

26.11. (Fri) 10:30 – 11:00	Nonclassical first-order logics: Semantics and proof theory Giuseppe Greco, Peter Jipsen, Alexander Kurz, M. Andrew Moshier, Alessandra Palmigiano, Apostolos Tzimoulis66
24.11. (Wed) 12:00 – 12:30	The Simple Model and the Deduction System for Dynamic Epistemic Logic Tomoaki Kawano 70
26.11. (Fri) 11:30 – 12:00	Two-Dimensional Rigidity Jonathan Mai 74
25.11. (Thu) 15:15 – 15:45	Completing most quantified modal logics Eugenio Orlandelli 77
25.11. (Thu) 14:45 – 15:15	Yes, Fellows, Well-known Modal Logics are at Most 8-valued Pawel Pawlowski, Elia La Rosa 84
23.11. (Tue) 10:30 – 11:00	Information Types in Intuitionistic Predicate Logic Vít Punčochář, Carles Noguera 87
23.11. (Tue) 15:45 – 16:15	Modal QUARC Jonas Raab90
24.11. (Wed) 14:45 – 15:15	Completeness in Partial Type Logic Jiří Raclavský, Petr Kuchiňka 93
24.11. (Wed) 15:45 – 16:15	Modal Intuitionistic Algebras and Twist Representations Umberto Rivieccio97
23.11. (Tue) 12:30 – 13:00	Changing the World Constructively Igor Sedlár102
24.11. (Wed) 14:15 – 14:45	Carnap’s Problem for Generalised Quantifiers Sebastian G. W. Speitel 105
23.11. (Tue) 15:15 – 15:45	Modals and Quantifiers in Neighbourhood Semantics for Relevant Logics Andrew Tedder, Nicholas Ferenz108
24.11. (Wed) 11:30 – 12:00	On Three-Valued Modal Logics: from a Four-Valued Perspective Xinyu Wang, Yang Song, Satoshi Tojo111

On the role of Dunn and Fisher Servi axioms in relational frames for Gödel modal logics

Tommaso Flaminio, Lluís Godo, Paula Menchón
and Ricardo Oscar Rodríguez

Extending modal logics to a non-classical propositional ground has been, and still is, a fruitful research line that encompasses several approaches, ideas and methods. In the last years, this topic has significantly impacted on the community of many-valued and mathematical fuzzy logic that have proposed ways to expand fuzzy logics (t-norm based fuzzy logics, in the terminology of Hájek [8]) by modal operators so as to capture modes of truth that can be faithfully described as “graded”.

In this line, one of the fuzzy logics that has been an object of major interest without any doubt is the so called *Gödel logic*, i.e., the axiomatic extension of intuitionistic propositional calculus given by the *prelinearity axiom*: $(\varphi \rightarrow \psi) \vee (\psi \rightarrow \varphi)$. As first observed by Horn in [9], prelinearity implies completeness of Gödel logic with respect to totally ordered Heyting algebras, i.e., *Gödel chains*. Indeed, prelinear Heyting algebras form a proper subvariety of that of Heyting algebras, usually called the variety of Gödel algebras and denoted \mathbb{G} whose subdirectly irreducible elements are totally ordered. Furthermore, in contrast with the intuitionistic case, \mathbb{G} is locally finite, whence the finitely generated free Gödel algebras are finite.

Modal extensions of Gödel logic have been intensively discussed in the literature [2, 3, 10]. Following the usual methodological and philosophical approach to fuzzy logic, they have been mainly approached semantically by generalizing the classical definition of Kripke model $\langle W, R, e \rangle$ by allowing both the evaluation of (modal) formulas and the accessibility relation R to range over a Gödel algebra, rather than the classical two-valued set $\{0, 1\}$ (see [1] for a general approach). More precisely, a model of this kind, besides evaluating formulas in a more general structure than the classical two-element boolean algebra, regards the accessibility relation R as a function from the cartesian product $W \times W$ to a Gödel algebra \mathbf{A} so that, for all $w, w' \in W$, $R(w, w') = a \in A$ means that a is the *degree of accessibility* of w' from w .

Here, we put forward a novel approach to Gödel modal logic that leverages on the duality between finite Gödel algebras and finite forests. This line, that was previously presented in [7], is deepened and extended by the present approach. In particular, we ground our investigation on finite Gödel modal algebras and their dual structures, that is, the prime spectra of finite Gödel algebras ordered by reverse-inclusion. These ordered structures can be regarded as the prelinear version of posets and they are known in the literature as *finite forests*: finite posets whose principal downsets are totally ordered. In general, Gödel algebras

with modal operators form a variety denoted by \mathbb{GAO} for *Gödel algebras with operators*. Hence, the algebras we are concerned with are those belonging to the finite slice of \mathbb{GAO} . The associated relational structures based on forests, as we briefly recalled above, might hence be regarded as the prelinear version of the usual relational semantics of intuitionistic modal logic. Accessibility relations R_{\square} and R_{\diamond} on finite forests are defined, in our frames, by ad hoc properties that we express in terms of (anti)monotonicity on the first argument of the relations themselves. These relational frames will be called *forest frames*.

Furthermore, we put forward a comparison between our approach to the ones that have been proposed for intuitionistic modal logic and, in particular, those developed by Palmigiano in [12] and Orłowska and Rewitzky in [11]. By analyzing the role that these different relational frames (namely, those presented by Palmigiano, Orłowska and Rewitzky, and ours) have in proving a Jónsson-Tarski like representation theorem for Gödel algebras with modal operators, we realized that forest frames situate in a middle level of generality between those of Palmigiano and those of Orłowska and Rewitzky. The former being the less and the latter being the more general ones.

More in details, we observe that, if we start from any Gödel algebra with operators $(\mathbf{A}, \square, \diamond)$, its associated forest frame $(\mathbf{F}_{\mathbf{A}}, R_{\square}, R_{\diamond})$ allows to construct another algebraic structure $(\mathbf{S}_{\mathbf{F}_{\mathbf{A}}}, \beta_{\square}, \delta_{\diamond})$ isomorphic to the starting one. Interestingly, the forest frame $(\mathbf{F}_{\mathbf{A}}, R_{\square}, R_{\diamond})$ is not the unique one that reconstructs $(\mathbf{A}, \square, \diamond)$ up to isomorphisms. Indeed, for every Gödel algebra with operators $(\mathbf{A}, \square, \diamond)$, there are non-isomorphic forest frames, Palmigiano-like, and Orłowska and Rewitzky-like frames that determine the same original modal algebra $(\mathbf{A}, \square, \diamond)$ up to isomorphism.

We start by considering the most general way to define the operators \square and \diamond on Gödel algebras and investigating the relational structures corresponding to the resulting algebraic structures. Later on, we focus on particular and well-known extensions. Precisely we consider two main extensions of Gödel algebras with operators: (1) the first one is obtained by adding the Dunn axioms, typically studied in the fragment of positive classical (and intuitionistic) logic [5, 4]; (2) the second one is determined by adding the Fischer-Servi axioms [6]. From the algebraic perspective, adding these identities to Gödel algebras with operators identifies two proper subvarieties of \mathbb{GAO} that we respectively denote by \mathbb{DGAO} and \mathbb{FSGAO} .

In contrast with the case of general Gödel algebras with operators whose relational structures need two independent relations to treat the modal operators, the structures belonging to \mathbb{DGAO} and \mathbb{FSGAO} only need, for their Jónsson-Tarski like representation, frames with only one accessibility relation. In addition, we study in detail the relational structures corresponding to two further subvarieties of \mathbb{GAO} . The first one is the variety obtained as the intersection $\mathbb{DGAO} \cap \mathbb{FSGAO}$. The algebras belonging to such variety have been called *bimodal Gödel algebras* in [3] and a modal algebra $(\mathbf{A}, \square, \diamond) \in \mathbb{DGAO} \cap \mathbb{FSGAO}$ is characterized by the property stating that, for every boolean element $b \in A$, both $\square b$ and $\diamond b$ are boolean as well. The second subvariety that we consider refines \mathbb{DGAO} . Indeed, any algebra $(\mathbf{A}, \square, \diamond)$ belongs to this class iff it satisfies

Dunn axioms, plus the requirement that $\Box a$ and $\Diamond a$ are boolean for all $a \in A$.
