# Hash-based Preprocessing and Inprocessing Techniques in SAT Solvers 

Henrik Cao<br>Deparment of Computer Science<br>Aalto University

June 27, 2021

## Content

- Hash-based methods (Section 3)
- Probabilistic analysis (Section 4)
- Experimental results (Section 5)

Hash-based methods

## Processing techniques

- Subsumption algorithms
[Bayardo and Panda, 2011]
- Variable Elimination [Eén and Biere, 2005]
- Blocked Clause Elimination [Järvisalo et al., 2010]

## Subsumption

$C \subseteq D$ for clauses $C, D$.

## Tautological resolvency

$C \otimes_{l} D=\mathrm{T}$ for clauses $C, D$ with $l \in C$ and $\bar{l} \in D$.

## Hash functions

$$
\begin{aligned}
& h(C)=\sum_{i \in[C]_{m}} 2^{i} \\
& {[C]_{m}=\{|l| \bmod m \mid l \in C\}}
\end{aligned}
$$

$|8| \bmod 8=0$
$|13| \bmod 8=5$
$|18| \bmod 8=2$
$|5| \bmod 8=5$
$|22| \bmod 8=6$
$|-22| \bmod 8=6$

## Collision signature

## Collision signature

The collision signature $u(C)$ of a clause $C$ and hash map $h$ is the $m$-bit signature with the $i$ th bit marked if $h$ maps at least two literals in $C$ to the corresponding index.

$$
\begin{aligned}
& \{16, \overline{13}, 2,11,14,10,6, \overline{6}\} \\
& u(C) \\
& \begin{array}{l|l|l|l|l|l|l|l}
0 & 0 & 1 & 0 & 0 & 0 & 1 & 0 \\
\hline
\end{array}
\end{aligned}
$$

## Clause relations

## Subsumption

$C \subseteq D$ for clauses $C, D$.

# Tautological resolvency 

$C \otimes_{l} D=\top$ for clauses $C, D$ with
 $l \in C$ and $\bar{l} \in D$.

## Clause relations

## Subsumption

$C \subseteq D$ for clauses $C, D$.

# Tautological resolvency 

$C \otimes_{l} D=\mathrm{T}$ for clauses $C, D$ with

$$
l \in C \text { and } \bar{l} \in D .
$$

$$
\begin{array}{l|l|l|l|l|l|l|l|}
\hline h(C) \\
\hline 1 & 0 & 0 & 0 & 0 & 1 & 0 & 1 \\
\hline
\end{array}
$$

$\Longrightarrow$ Inadmissible due to non-injectiveness of $h$.

## Clause relations

Non-subsumption
$C \nsubseteq D$ for clauses $C, D$.

Non-tautological resolvency
$C \otimes_{l} D \neq \mathrm{T}$ for clauses $C, D$ with $l \in C$ and $\bar{l} \in D$.

Non-Subsumption $C \nsubseteq D$

$$
\begin{aligned}
& \{8,29,5,7\} \\
& \{8,29,18,5,22\}
\end{aligned}
$$

Non-Subsumption $C \nsubseteq D$

$$
\begin{aligned}
& \{8,29,5,7\} \\
& \{8,29,18,5,22\}
\end{aligned}
$$

$$
\begin{aligned}
& \left.\begin{array}{|l|l|l|l|l|l|l|l|}
\hline 0 & 1 & 0 & 1 & 1 & 0 & 0 & 1 \\
\sim
\end{array}\right)
\end{aligned}
$$

## Non-Subsumption $C \nsubseteq D$

$$
\begin{aligned}
& \{8,29,5,7\} \quad\{8,29,18,5,22\}
\end{aligned}
$$

$$
\begin{aligned}
& \left.\begin{array}{|l|l|l|l|l|l|l|}
\hline 0 & 1 & 0 & 1 & 1 & 0 & 0
\end{array}\right] \sim h(D) \\
& h(C) \& \sim h(D) \\
& \begin{array}{lll|l|l|l|l}
0 & 0 & 0 & 0 & 0 & 0 & 0
\end{array}
\end{aligned}
$$

## Non-Subsumption $C \nsubseteq D$

$$
\begin{aligned}
& \{8,29,5,7\} \quad\{8,29,18,5,22\}
\end{aligned}
$$

$$
\begin{aligned}
& \left.\begin{array}{|l|l|l|l|l|l|l}
\hline 0 & 1 & 0 & 1 & 1 & 0 & 0
\end{array}\right] \sim h(D)
\end{aligned}
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\begin{aligned}
& \{8,28,4,7\} \\
& \{\overline{8}, 23,18, \overline{5}\}
\end{aligned}
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\begin{aligned}
& \{8,28,4,7\} \quad\{\overline{8}, 23,18, \overline{5}\}
\end{aligned}
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\begin{aligned}
& \{\overline{16}, 8,28,4,7\} \\
& \{16, \overline{8}, 23,18, \overline{5}\} \\
& h(C) \begin{array}{cc|c|c|c|c|c|c}
1 & 1 & 0 & 0 & 0 & 1 & 0 & 0
\end{array} \\
& \left.\begin{array}{l|l|l|l|l|l|l}
1 & 0 & 1 & 0 & 0 & 1 & 0
\end{array}\right] \quad h(D) \\
& \begin{array}{|l|l|l|l|l|ll}
\hline 1 & 0 & 0 & 0 & 0 & 0 & 0
\end{array} 0
\end{aligned}
$$

$$
C \otimes_{8} D=\top
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\begin{aligned}
& \{8,28,4,7\} \quad\{\overline{8}, 23,18, \overline{5}\}
\end{aligned}
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\{8,28,4,7\} \quad\{\overline{8}, 23,18, \overline{5}\}
$$

$$
u(C) \begin{array}{l|l|l|l|l|l|l|}
\hline 0 & 0 & 0 & 0 & 1 & 0 & 0
\end{array}
$$

$$
\left.\begin{array}{|l|l|l|l|l|l|l}
\hline 0 & 0 & 0 & 0 & 0 & 1 & 0
\end{array}\right] \quad u(D)
$$

Non-tautological Resolvency $C \otimes_{l} D \neq \top$

$$
\{8,28,4,7\} \quad\{\overline{8}, 23,18, \overline{5}\}
$$

$$
\left.\begin{array}{ll|l|l|l|l|l|l|l|l|l|l}
0 & 0 & 0 & 0 & 0 & 0 & 0 & 0 \\
\hline
\end{array}\right) \&(D) \& h(8)=0
$$

## Comparing Signatures

## Proposition 1 (Non-subsumption)

$$
\text { Let } h \in \mathcal{H} \text {. If } h(C) \& \sim h(D) \neq 0 \text { or } u(C) \& \sim u(D) \neq 0 \text {, then } C \nsubseteq D \text {. }
$$

## Proposition 2 (Disjointness)

Let $h \in \mathcal{H}$. If $h(C) \& h(D)=0$, then $C \cap D=\emptyset$.
Proposition 3 (Non-tautological resolvency)
Let $h \in \mathcal{H}, l \in C$ and $\bar{l} \in D$. If $h(C) \& h(D)=h(l)$ and $u(C) \& u(D) \& h(l)=0$, then $C \otimes_{l} D$ is non-tautological.

Proposition 4 (Non-membership)
Let $h \in \mathcal{H}$. If $h(C) \& h(l)=0$, then $l \notin D$.

# Probabilistic Analysis 

## A family of hash functions

- $h \in \mathcal{H}$ maps variables indepdendently and uniformly at random.
- $h(l)=h(\bar{l})$, i.e., $l$ and $\bar{l}$ map to the same index.
- $\|h(C)\|=$ number of bits set in $h(C)$.

## Clause signatures

Non-subsumption

Non-tautological resolvency

## Experimental Results

## Experimental Results

- Implementations of Subsumption, Blocked Clause Elimination (BCE) and Bounded Variable Elimination (BVE) as preprocessing techniques utilizing Propositions 1-4
- Report gain in processing time $\left(t_{\text {base }}-t_{\text {hash }}\right) / t_{\text {base }}$, where $t_{\text {hash }}$ and $t_{\text {base }}$ are the processing times (per instance) with signature-checks enabled / disabled respectively.

## Processing time

## Fraction of Signature Checks

## Conclusion

- Signature-based checking useful for subsumption / BCE
- Probably counter-productive for BVE
- Other areas of application in SAT

## Thank you!
